**Next Meeting  
Members' Show  
Joan Cook Memorial Trophy  
Tuesday 17th September**

### Minutes of the monthly meeting;

held at the Senior Citizens' Hall, Starkey Street, Forestville on Tuesday, 20<sup>th</sup> August 2019.

The meeting was opened by Trish Peterson at 8.25pm who welcomed members and our Guest Speaker, Neville Lee.

**Apologies:** John McAuley, Warleiti Jap, Bill & Lorraine Dobson, Cary Polis, Mick Korzenowski, Murray Corrigan, Bill Westwood, Mick Korzenowski, Garry & Harleen Williams, Bill Bradley

The minutes of the previous meeting as published in the Bulletin were accepted as a true record on the motion of Bryan Spurrs seconded by Ela Kielich

**Matters arising:** nil

### Correspondence:

- Northern Beaches Council – various receipts
- Bendigo Bank Term Deposit Review
- Cheque for \$500 from St Ives Orchid Fair
- Subscription – John Hurst
- Flyers – Orchid Spectacular – Victoria
- Flyers – Jon Baine's Tour to Malabar Coast

Moved for acceptance by Bryan Spurrs, seconded by Peter Dunstan

### General Business:

1. The Society's improved placement of 4<sup>th</sup> at the St Ives Fair was discussed and all participants thanked.
2. Acknowledgment of Tinka Riddell's generosity in making sleeves for pots for our display.
3. Certificates awarded to David Hemmings, Bill & Lorraine Dobson, Judith Barry and Sheree Howard.
4. Sheree Howard's ticketing acknowledged.
5. Storage cupboard transfer.
6. Shelving for St Ives Show display needs storage space.
7. Subscriptions now due.
8. Website up and going – members invited to visit.
9. Our Spring Show 7<sup>th</sup> and 8<sup>th</sup> September – Set-up Friday 6<sup>th</sup> September.  
Receive plants from 4pm. Tags and sales sheets required for plant sales.

10. Volunteer Roster for set-up, sales table, canteen and raffle ticket sales circulated.
11. ANOS Sydney Show at Eden Gardens on 31<sup>st</sup> August.
12. Unclaimed plant (in care of President) *Den.* Aussie Child 'Sydenham' x *Den.* Yondi Tina Goliath ex AON
13. Next meeting – Members' Spring Show and Joan Cook trophy for best *Den. kingianum*.

### Judges Report – Erik Lielkajis

**Plant of Evening:** *Dendrobium teretifolium*

– David Hemmings

### Other Plants of Interest:

*Dockrillia* Vivian Margaret x *Den.* Australian Ginger

– David Hemmings

*Dendrobium melaleucaphilum* – David Hemmings

### Guest Speaker:

After supper our guest speaker, Neville Lee, regaled us with his slides of his *Dockrillia* orchids. He also provided details and examples of pots he had modified to obtain varying depths and optimal growing conditions for these orchids. Thanks to Neville for a great talk.

**Lucky Door Prizes:** Richard Blaxland, Mark Asbury.

### Raffle Prizes:

Lynne Lane, Jim Moore, Bruce Potter, Ian Tanner, Jim Hemmings (2), Reiner Schneidereit.  
(Plants to be collected at the next meeting.)

**The meeting closed at 10.15pm**

### In My Bushhouse

Well September is here and for most native growers this is the time when all the hard work (ha ha) has paid off. The rain that pelted down for a few short days was incredible. My 'rain gauge' my wheel barrow was emptied half full then refilled again so I estimate that we received at least 6" under the old scale or 150mm

which was sorely needed however the 13 deg max days was neither required or appreciated as the flowers just stopped in their tracks.

However now when I walk out on to my deck this week as the sun comes up the smell is intense with honey and the fragrance of *Dendrobium speciosum*. Not everyone does or can like this as I have some, few in numbers, walk into our hall and turn around and walk back out. To them it's like a mouthful of chili, to me it's like a fine red wine just can't get enough.

Flowering no is *Dendrobium tetragonum*, *melaleucaphilum*, and *capitisyork*. *Dendrobium adae*, and all varieties of *Dendrobium speciosum*. *Plectorrhiza tridentata* is starting to release its fragrance which I might say is incredible considering the size of the flower.

Days are just nice with 20-23 degrees forecast with cloudless skies and the blooms are starting to open and set. Just look after them and stake racemes for transport to your shows and then untie when you put them on the bench.

Look out for aphids and other bugs as the weather warms up the will be about. The next huge job even before the *Sarcochilus* are opening will be repotting and some need to be done now. I will wait until after our show and cut off all 'spikes' and pot on or divide, to get the maximum growing time.

The work we put in earlier in the year with Confidor® balls and Neem oil has meant the least amount of bugs in the bushhouse for many a year. Next year this will be repeated over the whole collection inside and out.

Water restrictions are now in effect but shouldn't concern us too much as we have to water early in the morning or late evening but if you don't have a tank then this is something that you should have even a small one will help out greatly.

I intend to put in a misting system for this summer that in itself reduce the amount of water used but give the plants more humidity and contribute to cooling during the summer months. However more on that later.

Good Growing

Bill Dobson

### AUSTRALIAN CYMBIDIUMS IN NATURE

Ken Russell

Although there are almost 50 species in the genus *Cymbidium*, only three are native to Australia - *Cymbidium canaliculatum*, *C. madidum* and *C. suave*. These three species occur only in Australia. I have made an extensive study of these species where they grow in nature in New South Wales and southern Queensland and have discovered surprising differences in their cultural likes and dislikes, particularly the pH of the decayed material surrounding their roots. These results provide useful clues as to how we can better grow these three Aussies in cultivation.

I have examined plants of *C. canaliculatum* between my home town of Dungog (NSW) and Roma in Queensland, a habitat range of 1400 Km. Daily temperatures in its various habitats range from -12°C to

+50°C. Plants were found on a variety of hosts - eucalypts, native pines and native oaks - both living trees and stumps or fallen logs. Of the total plants surveyed, 60 were found on living trees and 85 on stumps or fallen logs. Ten were found on live native pines while thirty grew on fallen pine logs. pH tests were made around the root systems of each plant,

both near the surface and well down around the lower root System. The pH near the surface differed markedly from lower down, as shown by the following values:

Host	pH	
	Near surface	lower down
Live pines	6	9
Pine logs on ground	6.5	9
Other live trees	7	9.5
Other stumps & logs	7.5	9.5

The pH measured near the roots of seedlings (average leaf length 150-250 mm) growing on live native pines was only 4.5 but measurements taken on older plants ranged from pH 7 to 9. It seems therefore that the root system of *Cymbidium canaliculatum* prefers alkaline conditions, preferably about pH 9, and may modify its environment to suit. I recommend spraying cultivated plants with lime spray (1 gm per L) four times each year. This species grows vigorously in spring and summer and benefits from fertiliser applications during this period. In nature the root system hardly ever becomes dry, as the channel-like leaves channel any moisture provided by rain, dew or frost to the base of the plant. Decayed leaf matter provides the main source of nutriment.

*Cymbidium suave* plants were studied in nature between the Hunter River (near Newcastle, NSW) and the Brisbane River (near Ipswich, Queensland), a range of

1000 Km. Some plants were found near sea level (25 m), others at elevations up to 700 m. Hosts included blue gum, spotted gum, grey gum, water gum, red gum, brush box, blackbutt, stringy bark, ironbark, tallow wood, native pine and oak. Again, pH measurements were made just under the leaf mould at the base of the

plant and also much further down in the rotted heartwood (mudgut).

Number	Host	pH	
		near surface	in mudgut
195	dead stumps	4-5	4
65	dead wood logs	4.5	4
15	live trees	4.5	4
8	on rocks/bark	5	4
5	sick plants in stumps	5	6

Obviously, the root system of this species prefers acidic conditions. The study covered 288 plants in all, 250 of them carrying seed capsules (it was late September). The best plants had a 25 mm layer of good leaf mould from decaying leaves, twigs and bark around their bases. Decayed material (mudgut) taken from the centre of host stumps have pH 3.5-4, and I recommend the use of this material to achieve a Satisfactory pH range when cultivating *Cymbidium suave*. Other materials suitable for adjusting the pH of the potting mix include Phostrogen Acid Plant Food (a new product with pH 4.5), pineapple juice (pH 4.5) and coffee grounds (pH 4.5). Never apply lime to this species, as it hates alkaline conditions.

Only eight plants of *Cymbidium madidum* were Studied, all of them living on trees, logs and stumps in the Coifs Harbour area (mid-north coast of NSW). Material surrounding their roots had pH 6- 6.5.

KR

## NATURAL SOLUTIONS

### For the Control of Insects and Fungal - Bacterial Problems.

**GARLIC SPRAY:** is for small pests and general plant protection. Chop 90g of raw garlic and soak in 2 tablespoons of paraffin oil for 24 hours. Slowly add 600ml of water into which 7 g of soft soap has been dissolved. Stir well, strain through butter muslin and store in a china or glass container, (never use metal). Dilute the solution to one part in 50 to spray affected plants.

**RHUBARB SPRAY:** is an excellent insecticide. Cut up 1.5kg rhubarb leaves, boil in 3.5 litre of water then cool. Dissolve 125g of soft soap in 2.5 litres of hot water. Cool, strain and blend the two liquids.

**INSECT REPELLENT:** can be made from chopped garlic, onions, lavender leaves and flowers, mint and yarrow - mixed together then covered with water. Stand in an airtight container for 24 hours then strain. Add equal quantities of water and a few drops of organic detergent and apply as a spray.

**CHIVE TEA:** is effective for scab and mildew fungi. Use about 200g of dried chives (buy in bulk at a health food store) and cover with 600ml of boiling water. Infuse for one hour, then dilute one part to two of water.

### Fungal infections:

**CINNAMON:** A perfectly safe and effective fungicide that has saved many a plant for me. Can be purchased from any supermarket, or borrowed from your wife's spice rack. When cutting plants always seal with cinnamon. If you have a wet rot then cut it out and seal with cinnamon. Sprinkle liberally on to the plant. Will not hurt any foliage on ANY plant and you can lick your fingers to boot.

**CASUARINA:** needles - up to 9g - infused in a litre of boiling water makes a mild fungicide and protect against fungal and bacteria and mildew problems.
